Coaxial Attenuators / Terminators

Coaxial Attenuators

- A coaxial attenuator is a linear passive bidirectional transmission line component designed to be inserted between two coaxial lines in order to reduce the input power in a matched system by a predetermined ratio without otherwise disturbing the behaviour of the equipment.
- The power absorbed by an attenuator is returned to the environment through heat transfer by free air convection or by conduction cooled.
- The ratio of input to output power is expressed in logarithmic terms.
- Designed in accordance with MIL A 3933, MIL E 5400, MIL STD 202 et NFC 96315

Input power/Output power	Attenuation
2	3dB
4	6dB
10	10dB
