Single Row Angular Contact

- Low maintenance
- High quality/reliable
- Accommodation of combined loads

Supplementary designations

- B** 40° contact angle
- BECBP** B + E + CB + P
- E** Optimised internal design
- CB** Bearing for universal pairing with a normal axial clearance after mounting back-to-back or face-to-face

Single-Row Angular Contact

- Radial and axial loads accommodated
- 40° contact angle for maximum axial load capacity
- Paired bearings can take axial loads in both directions

Angular-contact ball bearings are non-separable type bearings. In addition to radial loads they can carry relatively heavy axial loads in one direction. Since an axial load is generated from a radial force these bearings are generally used as a pair facing each other. Applications for this type of bearing include pumps, vertical motors and industrial gear boxes.
