

- Hex or Allen™key.** High torque transfer, driving blade held securely by recess. No “cam-out”. P = plain, B = ball end.
- Torx.** Very efficient torque transfer, very strong driver and recess, Driving blade held very firmly in recess. No “cam-out”.
- Tamper resistant Torx.** Same virtues as conventional Torx head but with a raised pip of metal in the centre of the cavity. This stops normal Torx drivers from releasing the fastener, and also stops a plain slot blade being jammed into the head cavity.
- Bristol multiple spline drive.** High torque transfer at small sizes. No ‘cam-out’.
- Hex Nutdriver.**
- Torx Nutdriver.**
