Spring-Back Blade

Closed length = 150

- The heavy duty blade of this knife is mounted on a spring loaded carrier
- The blade is extended using a slider on the top of the case, but is retracted automatically when the slider is released
- This prevents injuries from being dropped or left laying about on tables etc., or from being accidentally put away into pockets
- The most common injury prevented by this knife is where it is dropped and instinctively caught, as the blade is instantly retracted
- Ideal for use where the knife is used frequently but for short periods such as packing departments etc.
- The body is bright red for high visibility

For spare blades see **adjacent column**
