

TC530EV

TC530EV is an evaluation and development system for TelCom's TC53x family of dual slope integrating converters. The TC530EV consists of the TC534 A/D converter, a pre-programmed microcontroller, a negative supply generator, regulated power supply, and user prototyping area. Typically, the host is a PC compatible or other personal computer. The user supplies a fixed 5.0V power supply and an RS232 cable. The TC530EV Evaluation System functions as a complete data acquisition system with maximum resolution of 18 bits (Overrange + Sign + Data). A software utility in the form of an Excel® spreadsheet is included that calculates all component values given the desired system parameters.
