(Video or TV out required for output to tape) or OHCI compliant IEEE- 1394 card

(for use with DV camera).

14.4 Kbps or faster modem for Internet connectivity.

Product Description

VideoWave 4.0 is MGI's latest contribution to the growing selection of desktop video-editing tools. It features an uncluttered user interface for increased functionality and easy workflow. Access just about any kind of video or audio to edit and use in your production. Capture video from an analogue or digital camcorder, TV, VCR, laserdisc, WebCam or the Internet. If the source of your capture is not digital, *VideoWave 4.0* will convert your analogue audio or video (Television, VHS, S-VHS, VHS-C, 8mm, Hi-8) to digital format. You can capture audio and video separately or at the same time. Even capture a single image or a sequence of frames for use in your production. *VideoWave 4.0* also lets you view live video before and during your capture. After your footage is on your hard drive, you can drag-and-drop elements from the library right into place. Edit any way you like with *VideoWave 4.0*'s almost unlimited range of audio- and video-editing tools. Eliminate the play, stop, rewind and fast forward process. If you have several scenes to edit, Scene Detection will find, separate and display your clips as thumbnail images, based on different scenes you recorded. Extract images, video and audio and save them as BMP, TIF, JPG, WAV files that you can use in other applications. Rearrange clips, add sound and a number of special effects or play back your edits on the Viewscreen. *VideoWave 4.0* comes with tons of special effects to enhance your scenes and add to your story line. Simply choose from the list of effects that appear in the Library to blend images, apply shadows, remove colours, add fades, graphics and more to your video. Time Warp is a new feature in *VideoWave 4.0* that lets you add fast or slow motion to your video clips. You can create clips that play up to 10 times faster or 20 times slower than normal. *VideoWave 4.0* lets you experiment and learn more about digital video production. You never have to worry about making mistakes or ruining your video. *VideoWave 4.0*'s non-destructive edit feature always keeps your original video intact, while producing a final copy of your production that contains all your edits, effects and other changes.
